

Project Initialization and Planning Phase

Date	30 June 2026
Team ID	xxxxxx
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Problem Statement :

Floods are among the most destructive natural disasters, causing significant loss of life, damage to property, and disruption to communities. Existing flood forecasting systems often struggle to provide timely and accurate predictions because they rely on traditional methods that may not effectively analyze complex weather patterns. This project aims to develop a machine learning-based flood prediction system that analyzes meteorological and environmental data to provide early flood risk predictions, enabling disaster management authorities to make informed decisions and improve emergency preparedness.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Disaster Management Officer	Identify flood-prone areas before flooding occurs	Current flood forecasting methods may not provide timely or accurate predictions	Weather conditions and rainfall patterns change rapidly, making manual prediction difficult	Responsible for protecting lives and ensuring timely disaster response
