

Project Executable Files

Date	15 March 2026
Team ID	XXXXXX
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No/NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	Executable binary (if applicable for mobile/desktop apps) / APK	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
Project Development Phase/
├── app.py
└── requirements.txt
```

```

├── README.md
├── dataset/
├── models/
│   └── best_model.pkl
├── notebooks/
├── static/
│   ├── css/
│   │   └── style.css
│   ├── js/
│   │   └── script.js
│   ├── images/
│   │   └── hero.png
├── templates/
│   ├── base.html
│   ├── index.html
│   ├── predict.html
│   ├── result.html
│   └── about.html

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed
Login Credentials (Demo)	Not Required
Hosting Platform / Provider	Local Flask Server
Repository Link	https://github.com/jaswanthtangudu111-stack/Rising-Waters
Demo Video Link	ProjectDemo.mp4

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

- Python 3.10 or above
- pip
- Virtual Environment (recommended)

Pre-requisites:

[List required software, versions, and system requirements]

- **Step 1:** Clone the repository: `git clone <url>`

- **Step 2:** Navigate to the project folder.
- **Step 3:** Create and activate a virtual environment.
- **Step 4:** Install dependencies: `pip install -r requirements.txt`
- **Step 5:** Run the application: `python app.py`
- **Step 6:** Open browser at `http://127.0.0.1:5000`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Uses static dataset	Live weather API can be integrated in future
2	Runs on local server	Can be deployed on Render/Heroku
3	No user authentication	Can be added in future versions
